Grumpy Joe's Lit Bars & DJ Booths

Colour Changing!

One piece fold flat colour changing bar counter with folding shelf.

Raised front panel to clear irregular floors. Simply unfold, no tools or screws required.

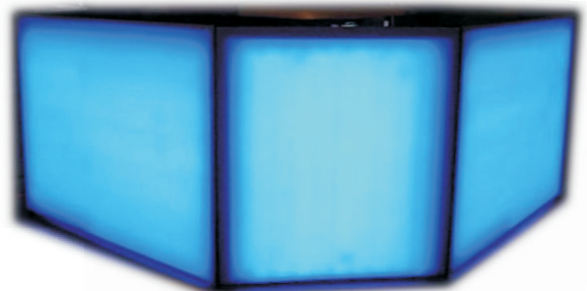

Bar units can simply be linked together with a lead and will then operate and synchronise from one controller connected together via a single connection.

Several bars and corners can be linked together in this way. Each bar has two fixed and linked power supplies.

Input is 230v AC, transformed down to a very safe 24v DC.

Bar corners allow you to place bar counters at 90° to each other without losing counter or shelf space.

The easy to use remote control function can be used to hold on one of seven different colours, or change colours in sequence at varying speeds.

Picture shows two lit bars and one external corner connected together to make a larger bar area.

Lit Bar Shelving

One piece fold flat colour changing bar shelving.

Ideal for mounting optics, displaying bottles and storing glasses.

These lit shelving units use the same technology as our Lit Bars and DJ Booths and can be linked and synchronised in the same way.

Folding DJ Booths

Designed to protect DJ equipment

Our colour changing folding DJ Booths work in the same way as our folding bars but the counter top has been designed at a 45° angle to prevent drinks being placed above expensive DJ equipment.

Just like our bars, units can be linked together and synchronised with a single remote control.
